

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. INDEX	11-287

INTRODUCTION.

There are in the United States at the present time, including that of the Federal Government, 33 offices popularly known as bureaus or departments of labor. These offices have various titles, as shown in the first of the tables included in this introduction, but their functions are similar. The first office of the kind in this or any other country was created by the Massachusetts legislature June 23, 1869. Up to the date of this index, March 1, 1902, these various offices had issued more than 450 reports and bulletins relating to social, economic, and industrial matters. Although there is a constant demand for data covered by these reports, the lack of an index to the same renders tedious and difficult the compilation of such information as is there given. The Department, in order to meet its own needs in this direction, published in 1892 as its Third Special Report an analytical abstract and index of the contents of the reports of each State. This abstract and index was of great value in enabling the Department to make immediate reference to the various subjects treated and the volume in which such treatment was contained. Many additional reports have been published since the date of the above-mentioned report, nearly ten years ago, and a repetition of the difficulties referred to has resulted in the present report, which consists entirely of an index of the subjects covered by the various reports which have been issued up to the present time (March 1, 1902), the analytical abstract having been dispensed with.

While this index is not for distribution in a general way, yet it will be found in the leading libraries of the country, where it will be placed for purposes of reference.

The following tabular statement gives the States in which labor bureaus are located, the official name of each bureau and title of the

head thereof, the date of the approval of the act creating the bureau, and the number of reports issued up to March 1, 1902:
